Date question answered: October 19, 2021

Question: Solar subsidization – we need to address this since it is a revenue negative thing. How is it a good thing for CPS to lose revenue with a hook up of a solar panel on the roof?

Answer: There are many benefits to roof top solar. However, we do think there is an imbalance in the net metering policy applied to these customers. This is a difficult topic with strong points of view on both sides. We will not address solar net metering during this rate request, but we will seek to address it in the near future in partnership with our community.
